

PenMount's Complete Software / Hardware Supports

With touch products gaining more and more popularity, many related electronic products, such as tablet PC, laptop computers, and even industrial Panel PC and POS, have their touch controllers designed onto system's main board, with the intention none other than the earliest product launch within limited time and space. Hence, when selecting controllers, suitable functions are the essential considerations.

PenMount has many-year experiences on integrating the applications of touch controller. PenMount not just shares the majority of the industrial and business computer markets, but PenMount also provides the customers with complete solutions whether it is touch controllers or control boards that customer is going to adopt. With PenMount, customers can always easily add touch functions onto their system.

As the hardware is concerned, PenMount provides designers with correct and multi-functional reference diagrams references and debugging service, so that developers can rapidly integrate PenMount controllers with their products. As the firmware is concerned, PenMount products are stable and reliable. If you have ever used the AD controllers with touch functions from other brands, you might have discovered that the firmware of PenMount touch controllers provided more flexible setting for argument, which made the compatibility of touchscreen obviously much better than other AD controllers. Therefore, once you select PenMount resistive touch controller, you won't need to worry about which resistive touchscreen brand to select since PenMount provides you with the complete soft- and hardware solutions, including drivers and related application programs. If you have special request, you can also develop your own touch controller application program according to PenMount's software development manual.

PenMount has always worked hard for technical support and applications development. Taking PenMount's single-touch gesture recognition software for example, it is widely accepted and in use among customers because it provides the configuration of hot-keys by which the differentiation of products is reached for customers. On the other hand, if the touch control interface should not function on your system, PenMount's technical support will do the best to help you find out the cause. After you install the touchscreen onto system, if the touchscreen is pressed by the frame and cannot operate; or if the order of the connect pin assignment between the panel and controller is not correct, which prevents the deviation from being adjusted by the adjust program; or if the noise is so large that impacts the operation of touch control and so on, PenMount technical support will make the cause clear to you at the earliest and fix the problem immediately.

Whether you select to design the control IC onto system main board or you choose to employ our PenMount touch controller, we will help with your perfect and correct design. For the Chinese New Year beginning on this Saturday, PenMount Team wishes you good luck in the coming Tiger Year!
